The After Fire Wipe for First Responders

www.deconwipe.co.uk

A simple solution to fire-fighter safety, welfare and hygiene on scene

The recognition of carcinogens remaining on personal protective equipment (PPE) has resulted in a structured cleaning approach for potentially contaminated kit in UK Fire and Rescue Services but what about the person wearing this PPE?

Global studies have demonstrated that Fire-fighters are up to three times more likely than the general population to develop cancer before age 75. This figure rises to five times where there is continuous exposure through a failure to properly clean off contaminants.

DeCon Wipe is an 'after the fire' wipe for use by first responders. DeCon Wipe has been designed and tested to provide immediate

and long-lasting protection from hazardous contaminants for fire-fighters and first responders to address the risks associated with carcinogens whilst also avoiding potentially skin damaging decontamination materials.

Careful consideration, testing and development have resulted in the DeCon Wipe, a solution that is scientifically formulated to help remove and reduce carcinogens and bacteria through its key ingredient, Micellar Water, a proactive compound that defends the skin against hydrocarbons, soot and dirt with ease.

Put simply, DeCon Wipes draw out impurities and cleans without drying out the skin.
